

Fairy Logic Analysis

By: Naliah Mendez Cairns

Fairy Logic makes realizing old social guidelines that are not up to world peace standards pleasurable and educational to reform. According to Jesus, virtuosity is harmony with the father's knowledge of it. This technique can help an artist to promote the general welfare. Once mastered it's as easy as a dictionary to use. The fairy logic formula has four parts. Each stage is identified with a symbol that elicits correction. This formula works nicely for sketchbook community thesis development and is rooted in the virtues that grant greatest advantage in the field.

The first calculation is represented in the artist logic equation with an X shape. This symbol represents historical data that needs to be reconsidered in order for the artist to communicate with the public about that proclamation. The X needs reforming and reciprocation for the artist's logic!

Stage two's symbol looks like crossed lab spoons. It's understood as divide is mathematically. The open and closed circles at the ends of the spoons remind the artist to exercise her civil rights. Discern with Pan African principles and non-judgmental philosophy. The laboratory reference also reminds artists to continue working with cures.

Stage three is called the fairy's magic stick. Its corresponding symbol is the modified letter J. Use it to unpack the new ideas that realign X. The magic stick calculation may require research into X's church ties, community awareness, government involvement, and African appreciation. These categories resurrect inspirational data and the exciting synthesis between art and science.

A cup shape with a darkened blob in it represents stage four- the correction. This enables the artist to use her creative energy in the world to make it well. Log the changes that keep it good. The artist becomes promulgator of the community's goal.
